Wildlife Wonders - Hummingbirds

Hummingbirds, the tiny acrobats of summer, are

the only birds that can fly backwards and upside down, and hover. While flying, they need the most oxygen of any animal and their hearts beat an astounding 1,200 times per minute! They are so evolved for life in the air that they can't hop or walk, only perch, which they do for 80% of each day to conserve energy. Even still, they need to refuel every 15 minutes. They can also remember every flower they visit so they don't waste time where the nectar is gone. They also eat insects and spiders for protein. If you have a hummer feeder, remember to change the sugar water every 2-3 days in the hot weather so it doesn't go bad.

Kids Corner

[Sense Scouting](#)

Spend some time outside and record what you see, smell, hear and feel on your adventure! Keep a journal this activity changes as the seasons change!

[The One and Only Chopper](#)

Don't forget to treat your kids to this imaginative children's short story about a very special beaver, shared by the author in honour of our 75th. Ideal for kids 6-10.
